

TECHNICAL TIP

Type HBC Hook Forging Markings

An example of markings on an SD2-HBC5V size load hook.

Hook Forging Markings

Example 1 above: **SD2-HBC5V**

SD2 - The Manufactures Marking

HBC – The markings to describe the “handy hooks”

5 - The Hook Number that corresponds to a hook with the same number per DIN15400 (Notice that dimensions of HBC hooks are not according to DIN or any other standards) **V** -

The Symbol of the forging material strength grade per DIN15400

Note that there is a number 612 stamped to the left of the SD2-HBC5V in the above photo. What does the 612 represent?

612 and **SD2** are manufactures markings about forging and heat treatment batches.

TECHNICAL TIP

Type HBC Hook Forging Markings

An example of markings on an HBC1.6V size load hook.

Hook Forging Markings

Example 2 above: **HBC1.6VJD10**

HBC - The markings to describe the "handy hooks"

1.6 - The Hook Number that corresponds to a hook with the same number per DIN15400 (Notice that dimensions of HBC hooks are not according to DIN or any other standards)

V - The Hook Number that corresponds to a hook with the same number per DIN15400 (Notice that dimensions of HBC hooks are not according to DIN or any other standards) **JD10**

- The Manufactures Marking

Note that there is a number F5-1 stamped to the right of the HBC1.6VJD10 in the above photo. What does the F5-1 represent?

JD10 and **F5-1** are manufactures markings about forging and heat treatment batches.
